/Cynthia H Kelly/ Supervisory Patent Examiner, Art Unit 1795			

Continuation of 13. Other: Applicant argues that even if Victor teaches components A-C-A, the photosensitive resin composition of Victor requires additional components which would materially affect the basic and novel characteristics of the claimed invention. Applicant is directed to column 3, lines 45-col. 4, line 9 wherein Victor teaches a composition comprising an elastomeric monomer, an ethylenically unsaturated compound, a photopolymerization initiator and an elastomeric block copolymer. Although Victor teaches the liquid isoprene and butadiene as optional linkages in the block in column 7 of the reference, Victor teaches that liquid isoprene and liquid butadiene meet the limitations of monomers for the block copolymer in component (col. 7, lines 40-52). Therefore, the liquid isoprene and liquid butadiene are not extra components in the Victor reference. Applicant argues that liquid isoprene and liquid butadiene are not the same as block copolymers having the formula A-C-A or (A-C)nX. Further, that these are linear polymers but not block copolymers. Victor teaches a block copolymer with a formula A-B-A wherein the block copolymer may comprise linear components, such as isoprene and butadiene (col. 7, lines 50-52 and col. 8, lines 1-15). Applicant argues that applicants' claimed invention may include auxiliaries and not depart from the claimed invention. Further, that Victor's component (A) is outside the scope of parts (a) through (d) of the present claims and would materially affect the basis and novel characteristics of the claimed invention. In component (d) of the claimed invention, applicant discloses a block copolymer with the formula A-C-A. Victor teaches a block copolymer with the formula A-B-A, the block copolymer may comprise linear components, such as isoprene and butadiene. These are the same as applicants' block in part (d) of the claimed invention.
